

Echinoderms → Invertebrate Chordates

28-4 SECTION REVIEW

1. What is an echinoderm? Name five kinds of echinoderms.
2. How do tube feet help echinoderms to carry out their essential life functions?
3. How do starfish move? How do starfish open bivalves?
4. **Connection—Ecology** Why is tearing a starfish apart and throwing it back into the water not a good way to limit a starfish population?

30-1 SECTION REVIEW

1. What characteristics are found in a chordate?
2. What characteristics of tunicates and lancelets make them seem like close relatives of vertebrates?
3. **Critical Thinking—Making Comparisons** Which characteristics of tunicates and lancelets are unlike vertebrate characteristics?
